Insert new claims 10-17, as follows:

- 10. (NEW) A method for producing chemical pulp from lignocellulose-containing material by means of alkaline cooking, comprising the steps of
- a) charging said lignocellulose-containing material to a digester;
- b) initially treating said lignocellulose-containing material with an impregnation liquor to produce an impregnated lignocellulose-containing material;
- c) treating said impregnated lignocellulose-containing material with hot liquor so as to produce a heated lignocellulose-containing material, and displacing calcium-containing spent liquor from said digester during said treatment;
- d) heating and cooking said heated lignocellulose-containing material at predetermined cooking temperatures and pressures so as to produce cooked lignocellulose-containing material and cooking liquor; and
- e) displacing said cooking liquor from said digester using at least a portion of said displaced calcium-containing spent liquor.
- 11. (NEW) The method according to claim 10, including collecting said displaced calcium-containing spent liquor from said digester in a first portion having a first calcium content and at least one second portion having a second calcium content, said at least one second portion having a lower calcium content, on a dry solids basis, than said first portion.
- 12. (NEW) The method according to claim 11, including combining said at least one second portion of said calcium-containing spent liquor with a portion of said displaced cooking liquor to produce a combined liquor, and supplying said combined liquor to a subsequent batch of said lignocellulose-containing material to supply heat thereto.
- 13. (NEW) The method according to claim 11, including displacing said cooking liquor from said digester using said first portion of said displaced calcium-containing spent liquor.

- 14. (NEW) The method according to claim 13, wherein said displacing of said cooking liquor from said digester using said first portion of said displaced calcium-containing spent liquor comprises the first portion of liquor introduced into said digester for displacing said cooking liquor therefrom.
- 15. (NEW) The method according to claim 11, including displacing said cooking liquor from said digester using said at least one second portion of said calcium-containing spent liquor.
- 16. (NEW) The method according to claim 10, including monitoring the calcium content, on a dry solids basis, of said calcium-containing spent liquor during its displacement.
- 17. (NEW) The method according to claim 10, including monitoring the temperature of said calcium-containing spent liquor during its displacement.
